ONLINE HOTEL BOOKING SYSTEM

-TEAM-5

Project Purpose

The purpose of an online booking system is to allow potential customers to self-book and pay through your website, securely store customer's data, manage your staff and keep your business running long after you've gone home for the day. And that just scratches the surface. An online booking system is so much more than just a piece of software that reserves an appointment with your business.

Here are the purposes for online hotel booking system:

- Keep your business running 24/7
- Security
- Relieve your employees
- Customer experience
- Organization.

Overview

- This Application provides a computerized and automated version of Hotel Booking Management System which will benefit the hotel companies and their users.
- It makes entire process online and can generate reports. It has a facility of user's login where users can view their booking details.
- The Application was designed in such a way that future changes can be done easily. The following conclusions can be deduced from the development of the project.
- Automation of the entire system improves the productivity.

- It gives appropriate access to the authorized users depending on their permissions.
- It effectively overcomes the dIt provides a friendly graphical user interface which proves to be better when compared to the existing system.
- Delay in communications.
- Updating of information becomes so easier.
- System security, data security and reliability are the striking features.
- The System has adequate scope for modification in future if it is necessary.

Abstract

The aim of 'Online Hotel Booking System' is to automate its existing manual system by the help of computerized equipment and full-fledge computer software, fulfilling their requirements so that their valuable data can be stored for a longer period with easy accessing and manipulation of the same. Basically, the project describes how to handle good performance and provide better services to clients. This project can lead to error free, secure, reliable and fast management system. This system will help the organization in better utilization of resources.

Software Requirements Specifications

Functional Requirements

User Module

1. **Home:** It is a welcome page for users.
2. **About:** It is a about us page of website.
3. **Services:** In this section, users can view services provided by organization.
4. **Room:** In this section, user can view details of room which is available in the hotel.
5. **Gallery:** In this section, user can view gallery of hotel.
6. **Book Room:** In this section, user can book the hotel room by registered himself with hotels.
7. **Contact:** It is a contact us page where users can send the queries to hotel.
8. **Sign Up:** Users can register through sign up page.
9. **Login:** It is login page.
10. **My Account:** After registration user can have their own account where he/she can update profile, change password, recover password and view booking details of hotel room.

Admin Module

- 1. Home:** In this section, admin can briefly view the total new booking, approved booking, Cancelled Booking, Total Registered users, total read enquires and total unread enquires.
 - 2. Room Category:** In this section, admin can manage category (add/delete).
 - 3. New Room:** In this section, admin can manage rooms(add/update).
 - 4. Page:** In this section, admin can manage about us and contact us pages.
 - 5. Booking:** In this section, admin can view new, approved, canceled bookings and give a remarks.
 - 6. Reg Users:** In this section, admin can view the detail of registered users.
 - 7. Enquiry:** In this section, admin can view and maintain the enquiry.
 - 8. Search:** In this section, admin can search enquiry and booking details with the help of his/her mobile number and booking number, respectively.
 - 9. Reports:** In this section admin can view the enquiry details and check booking details in a particular period.
- Admin can also update his profile, change the password and recover the password.

Non-Functional Requirements

Safety Requirements

There are several user levels in online Hotel booking System. Access to the various subsystems will be protected by a user login screen that requires a username and a password. This gives view and accessible functions of user level through the system.

Security Requirements

Customer Service representatives, managers and owner will be able to log in to the online Hotel booking System. Customer Service representatives will have access to the Reservation/Booking and subsystems. Managers will have the access of management system as well as the reservation/booking subsystems. Owner has the maximum privilege to all sub systems. Access to the various subsystems will be protected by a user log in screen that requires a username and password.

General Requirement Questions

- Why do you prefer online hotel booking system over offline hotel booking system?

Online hotel booking system is much easier compared to offline. For all those who have time constraints and are busy with other works. It is also preferred by the people who live in remote localities.

- What are your views about refund?

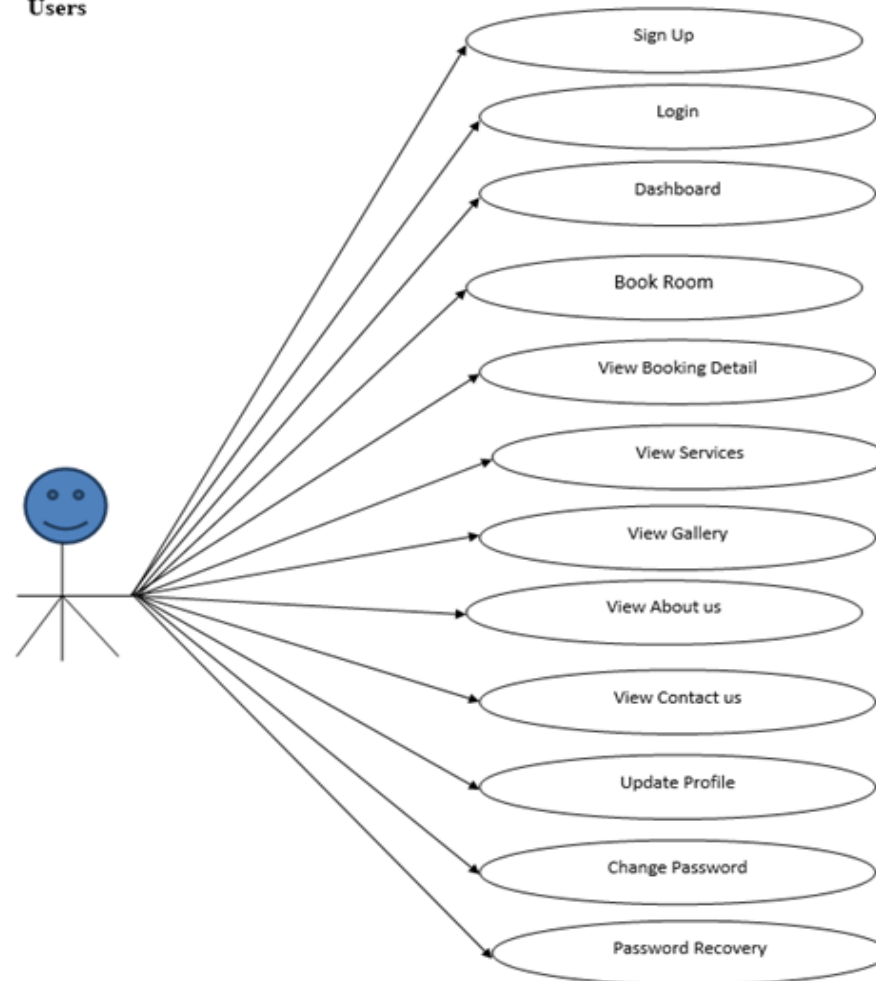

Customer can get the refund if they cancel their booking before one day from their selected date otherwise no refund is possible.

- What are the features important to you regarding customer information?

The reviews and feedback given by the customers can be used to remove the backdrops and improve the business.

	Check in date: 19-10-2022 Check out date: 10-10-2022	Check out date must be equal to / greater than check in date	failed
Search booking	Enter your booking number: If valid number is given	Details will be displayed	passed

	Enter your booking number: If it is not a valid number	No records found	failed
Search enquiry	Enter your mobile number: if it is Valid mobile number	Information will be displayed below	passed
	Enter your mobile number: if it is invalid mobile number	no record found against this search	failed
Add room	If any of the options are empty	Fill the required information	failed
	If all the options are filled	Successfully room added	passed
Reports	From date: choose date To date: choose date	If there are any records found then it will be displayed	passed
		If there are no records found then it will be empty	failed
CAB BOOKING	Form location: any location is given To location: any location is given	Cabs available	passed
	Form location to location: if location not specified	Specify a location	failed

Implementation and System Testing

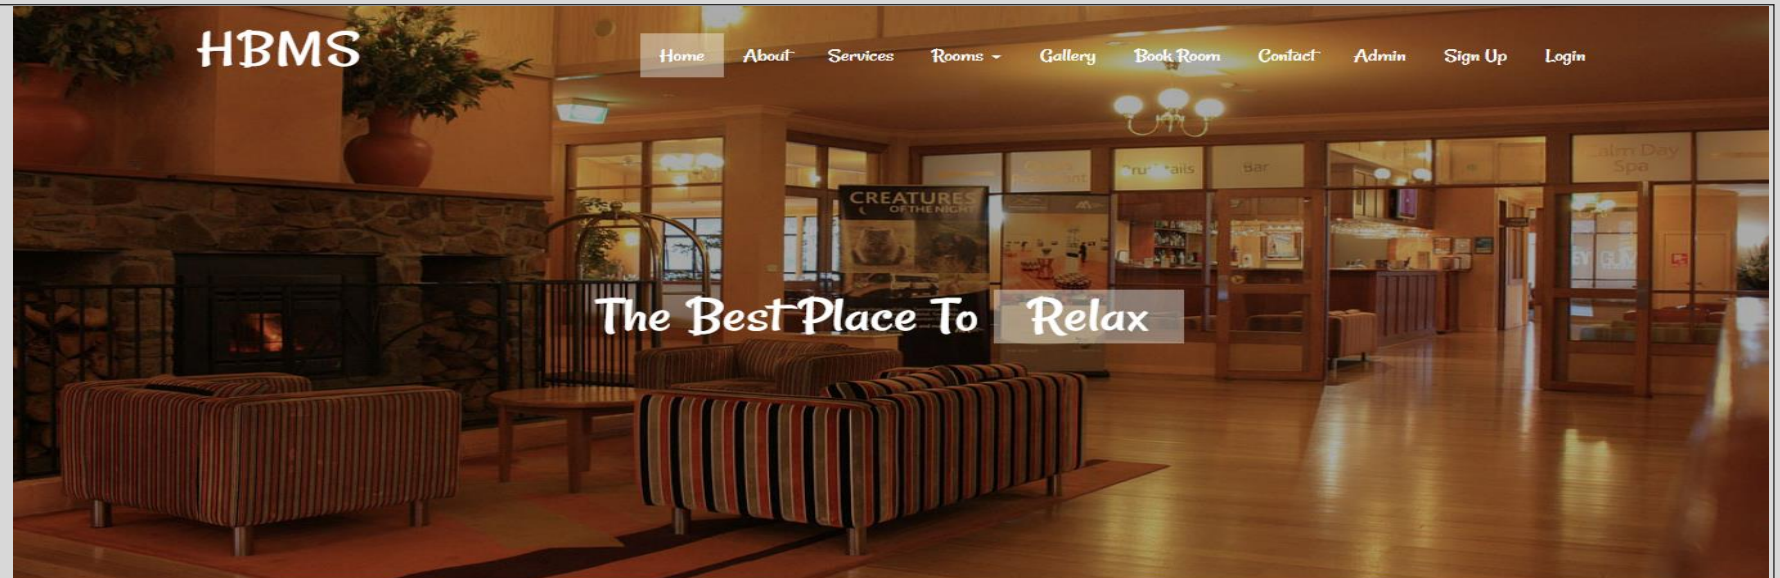

- After all phase have been perfectly done, the system will be implemented to the server and the system can be used.

System Testing

The goal of the system testing process was to determine all faults in our project. The program was subjected to a set of test inputs and many explanations were made and based on these explanations it will be decided whether the program behaves as expected or not. Our Project went through two levels of testing

- Unit testing
- Integration testing
